USING LLMC

LLMC streamlines the process from policy issuance to placement, including claims management. This allows the Underwriter to apply the appropriate terms, limits, conditions and restrictions of the policy in order to properly manage and control all requested and reported risks.

Transactional – Individual shipments are checked for policy compliance and rating is available upon request. Certificates can then be printed. Any non-compliant requests are placed in a referral status for further risk assessment.

Multi-transactional – LLMC also facilitates multi-shipment reporting. If you only require imports or exports to be reported by the shipped or insured value, by interest, by mode of transportation, by route, or any combination of these, LLMC will accommodate you.
